

January 4-7, 2011, The Grand Hyatt Kauai Resort & Spa, Koloa, Kauai, Hawaii.

Track: Collaboration Systems and Technologies

Minitrack: Collaborative Modeling

The key focus in this year's minitrack is the exploration and comparison of approaches to collaborative modeling, technological implementation of tools, their deployment and the integration of theory and practice. We will host papers on theoretical contributions as well as contributions showing practical examples for the support of collaborative modeling both from education and field experiences. Each of these papers offers interesting insights and approaches to this challenging research domain, and we recommend the papers to your reading.
